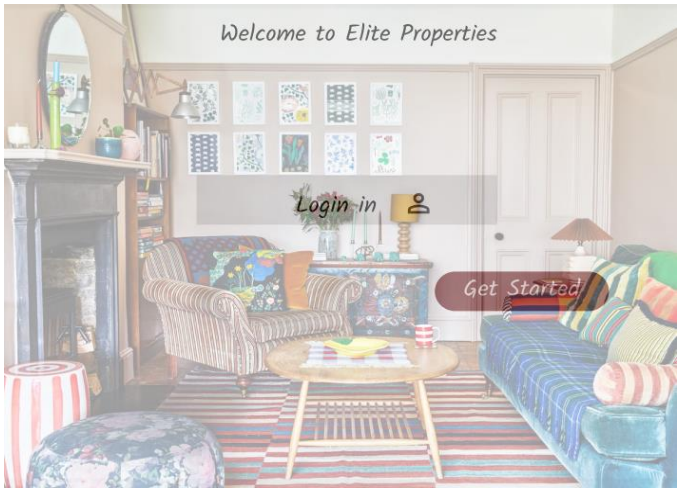
USER INTERFACE AND DESIGN

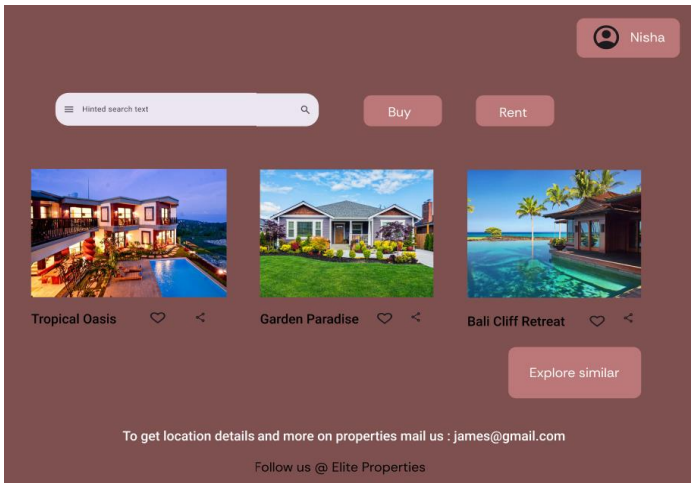
EXPERIMENT-1

ROLL NO: 240701161 NAME: N.HANISHKHA

COMPARISON OF UI DESIGNS BETWEEN TWO FIGMA CREATION

**BAD WEBSITE:**



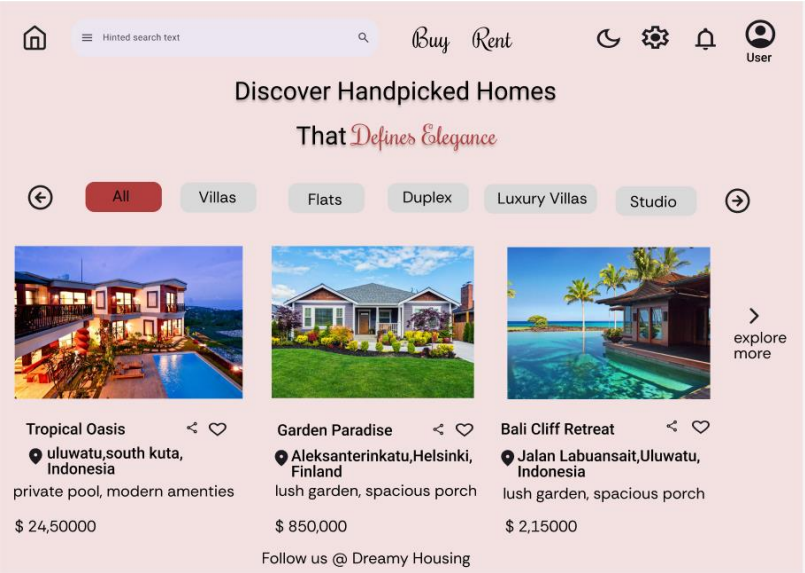


**1. Analysis of the Bad Design: "Elite Properties"**

- **Poor Contrast and Legibility:** The white script font on a pale, busy background fails basic accessibility standards. The text "Welcome to Elite Properties" is nearly impossible to read at a glance.
- **Weak Call to Action :** The "Get Started" button is small and lacks a high-contrast colour. Its placement in the bottom-right corner makes it easy to miss, leading to a high bounce rate.

- **Lack of Visual Hierarchy:** The central "Login in" box is as large as the primary header, confusing the user about whether they should log in first or explore properties.
- **Non-Standard Navigation:** Using script fonts for functional links (Buy, Rent) reduces "scannability." Users must focus harder just to identify the navigation options.

**GOOD WEBSITE:**



**2. Analysis of the Good Design: "Dreamy Housing"**

- **Clear Visual Hierarchy:** The use of bold, sans-serif headings ("Discover Handpicked Homes") immediately anchors the user's attention. The price and location are emphasized through weight and size.

- **Improved Findability:** The inclusion of a search bar at the top and category filters (Villas, Flats, Duplex) significantly reduces the time it takes for a user to find a specific type of property.
- **Consistency and Affordance:** The property cards use a repeatable pattern—image, title, location, and price—allowing for easy comparison. The icons (heart, share) are industry-standard, so users intuitively know their function.
- **Whitespace and Grouping:** By using ample whitespace around the property cards, the design avoids information overload. The proximity of the "Buy" and "Rent" toggles clearly indicates they are related actions.

**Key Differences:**

**1. Background and Focus**

- **Bad Design:** Uses a busy background photo in the home page that makes the text hard to read and distracts the user.
- **Good Design:** Uses a clean, plain background so the property photos and details are the main focus.

**2. Text and Readability**

- **Bad Design:** Uses cursive/fancy fonts for buttons and titles, which are difficult to scan quickly.
- **Good Design:** Uses bold, simple fonts that are easy to read at a glance.

**3. Layout and Order**

- **Bad Design:** Elements are scattered around the screen, making it look messy and unprofessional.
- **Good Design:** Everything is perfectly aligned in a grid, making the website feel organized and trustworthy.

**4. Pricing and Details**

- **Bad Design:** Important details like the price and location are hidden.
- **Good Design:** Shows the price, location, and features (like "private pool") clearly on every house card.
