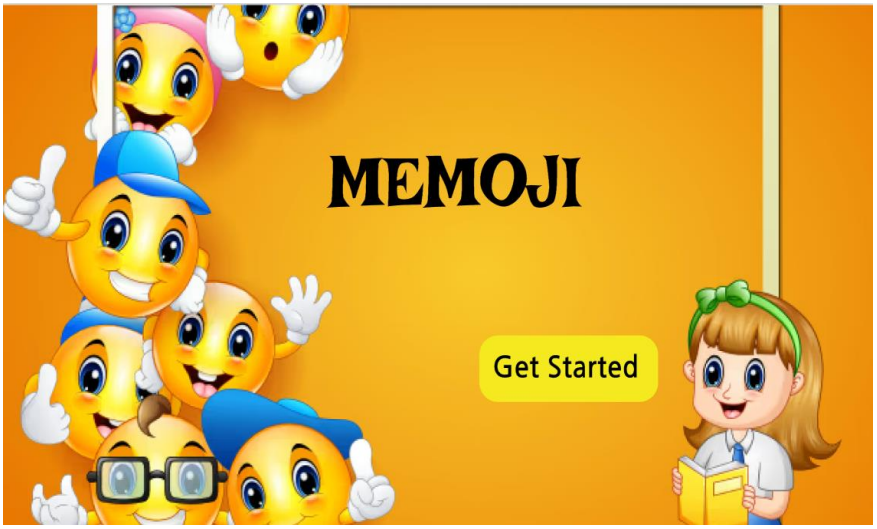
Experiment -2

NAME: N HANISHKHA ROLL NO: 240701161

Design a UI where users recall visual elements (e.g., icons or text chunks). Evaluate the effect of chunking on user memory.

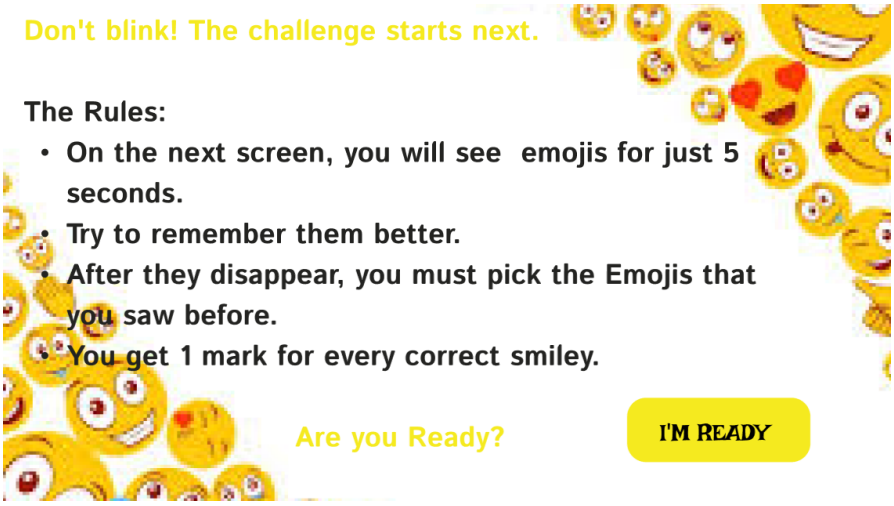
Frame 1: Start/Login Screen

- **Visual Elements:** An animated "MEMOJI" logo and a "Get Started" button.
- **Objective:** To establish a clear entry point and gather user credentials before the experiment begins.



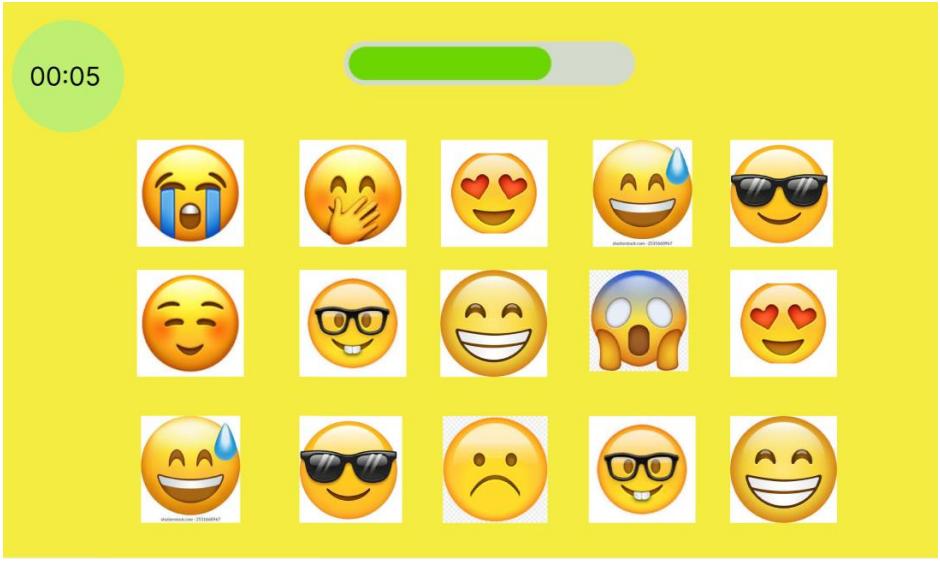
Frame 2: Instruction Page

- It contains Task Guidelines & Strategy
  - **Sequential Numbering:** Instructions are broken into clear steps to reduce cognitive overload.
  - **Memorization Strategy:** Specifically explains "Chunking" to help users process emojis as manageable units.
  - **Action Button:** A large "START" button to move to the timed observation phase.



Frame 3: Study Phase (The Chunking Screen)

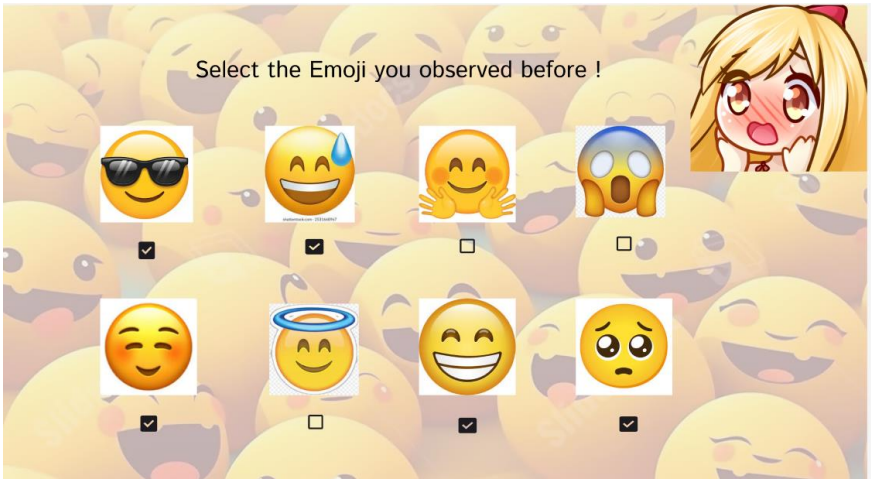
- Observation & Memorization (Timed)
    - **The Grid:** A grid displaying four distinct smiley emojis for the user to memorize.
    - **Timer UI:** A digital countdown starting at 00:05 and a shrinking "Loading Status Bar."
    - **Time Constraint:** Users are given exactly 5 seconds to view and "chunk" the items before they are hidden.



Frame 4: Recall Phase

- Recognition & Selection Phase
    - **The Selection Grid:** A larger grid containing the 4 target smileys and several distractors.

- **Task:** The user must identify and click the original emojis they memorized during the study phase.
- **Feedback:** Visual indicators, such as a blue border or "Selected" variant, appear when a smiley is clicked.



Frame 5: Results Screen

- **Name:** Performance Evaluation & Feedback
- **Content:**
  - **Scoreboard:** Displays the user's accuracy (e.g., "YOUR SCORE: 85%") on a visual board.
  - **Action Buttons:** Options for "TRY AGAIN," and "EXIT" to give users control over the session.
  - **Gamification:** An animated character adds a playful touch to the results display.
