EXPERIMENT 5

ROLL NO: 240701161 NAME: HANISHKHA N

Conduct task analysis for an app (e.g., online shopping) and document user flows. Create corresponding wireframes using lucidchart

Task Analysis

Task analysis involves breaking down the specific goals a user wants to achieve and the steps required to get there. Here QUICK RIDE is a ride booking application.

1. Authentication (Login/Sign-up).
2. Route Selection (Setting pickup and destination).
3. Service Selection (Choosing ride type based on price/time).
4. Driver Matching (System search and user confirmation).
5. Transaction Management (Payment processing and receipt).

Documented User Flow

Phase A: Onboarding & Request

- **Start:** User opens the "Quick Ride" app.
- **Authentication:** User logs in or signs up.
- **Input:** User sets the pickup location (via GPS or manual entry) and the destination.
- **Selection:** User views available ride options (Eco, Comfort, Pool) and selects one.

Phase B: Matching (Decision Node 1)

- **System Action:** Searching for nearby drivers.
- **Condition:** If no driver is found, the user is prompted to "Look Again." If found, the user sees the driver's info (e.g., Peter Parker).

Phase C: Confirmation & Payment (Decision Node 2)

- **Booking:** User confirms the booking and proceeds to the payment summary.
- **Authorization:** System captures/authorizes the payment.
- **Condition:** If payment fails, the user must retry or change the method. If successful, the receipt is generated.
- **End:** Trip is initiated or receipt is received.

Wireframe Analysis

1. Login / Authentication Screen

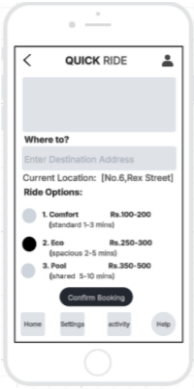
This is the **entry point** of the application.

- **Purpose:** To identify the user and pull their saved preferences, payment methods, and ride history.
- **Key UI Elements:**
  - **Input Fields:** Clear placeholders for "Username/Email" and "Password."
  - **Secondary Links:** A "Forgot Password?" link to handle common user errors without forcing them to leave the app flow.

2. Ride Selection & Booking Screen

- **Purpose:** To capture the "Where to?" intent and allow the user to choose a service level.
- **Key UI Elements:**

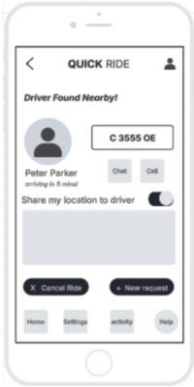
- **Location Inputs:** Displays the current location (detected via GPS) and a text field for the destination.
- **Service Tiers:** A list showing different ride types (Comfort, Eco, Pool) with corresponding price ranges (e.g., Rs. 250-300) and ETAs.
- "Confirm Booking" button to move to the matching phase.



3. Driver Found / Tracking Screen

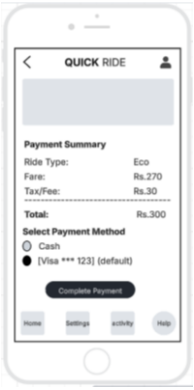
This screen acts as the **confirmation of service** and provides security details.

- **Purpose:** To reassure the user that a driver has been assigned and provide identifying information.
- **Key UI Elements:**
  - **Identity Details:** Shows the driver's name (Peter Parker), a profile photo placeholder, and the vehicle license plate (C 3555 OE).
  - **Communication:** "Chat" and "Call" buttons for co-ordination.
  - **Safety Feature:** A toggle to "Share my location to driver."
  - **Alternative Actions:** "Cancel Ride" or "New Request" buttons for flexibility.



4. Payment Summary Screen

- **Purpose:** To provide a transparent breakdown of costs and select the funding source.
- **Key UI Elements:**
  - **Fare Breakdown:** Itemizes the "Ride Fare" (Rs. 270) and "Tax/Fee" (Rs. 30) to show a "Total" of Rs. 300.
  - **Payment Picker:** Radio buttons to choose between "Cash" or a saved "Visa" card.



5. Success / Receipt Screen

- **Purpose:** To provide proof of transaction and transition the user back to the active ride status.
- **Key UI Elements:**
  - **Confirmation Header:** High-visibility "Payment Successful!" text.
  - **Transaction Data:** Displays a unique Transaction ID and re-confirms the assigned driver and ETA (5 mins).
  - **Navigation:** A "View Ride Status" button that likely leads to a live map view.
