EXPERIMENT 8

ROLL NO: 240701161 NAME: HANISHKHA N

Create storyboards to represent the user flow for a mobile app (e.g., food delivery app) using Balsamiq

Step 1: Define the User Flow

1. **Identify Key Screens:**
    - **Discovery Screen:** Browsing currently showing films.
    - **Showtime Screen:** Selecting the theatre and timing.
    - **Seat Selection:** Choosing the preferred layout.
    - **Booking Review:** Finalizing price and seat details.
2. **Map the User Journey:**
    - The user opens the app, selects the film *"The Voyage"*, picks a 5:00 PM show at a local cinema, chooses three seats in the center, and completes the payment.

Step 2: Create Storyboards Using Balsamiq

Low-Fidelity Design Principles

- **Minimalist Aesthetic:** Using standard "Sketch" skins to keep the focus on the flow rather than visual polish.
- **Visual Hierarchy:** Usage of larger font sizes for the movie title (*The Voyage*) and bold buttons for primary actions like *"Book Now"*.
- **Consistent Navigation:** The "Back" arrow icon is in the same position (Top Left) on every screen to maintain user orientation.

Example Screens for Movie Booking App (Le Grand Écran)

1. Discovery Screen (Home)

- **Logo & Tagline:** *"Le Grand Écran: Secure your passage to the Seventh Art."*
- **Movie Poster Placeholder:** A large square with a cross representing *"The Voyage"*.
- **Description:** Two-line poetic summary of the film.
- **"Book Now" Button:** Primary action button to start the flow.

2. Showtime Screen

- **Theatre Dropdown:** A selection menu for theaters (e.g., *Cineplex Main*).

- **Date Picker:** A horizontal scroll or calendar icon for selecting the date.
- **Time Slots:** Rectangular buttons showing available times (e.g., *2:00 PM, 5:00 PM, 8:00 PM*).

3. Seat Selection Screen

- **Screen Indicator:** A curved line at the top labeled "SCREEN."
- **Seat Grid:** A series of small squares. Use **darker gray** for booked seats and **white/transparent** for available ones.
- **Legend:** Small labeled squares showing "Available," "Booked," and "Selected."
- **Total Price Label:** Dynamic text showing the count and price (e.g., *3 Seats | ₹1500*).

4. Booking Review & Confirmation

- **Summary Card:** Lists the movie name (*The Voyage*), timing, and seat numbers (e.g., *C1, C2, C3*).
- **Payment Method:** A simple dropdown for Credit Card/UPI.
- **"Confirm & Pay" Button:** The final step to trigger the success message.

Creating Story Board using Boords:

Storyboarding is a visual planning technique used to illustrate a user's journey through a narrative or an application. For the **Le Grand Écran** project, Boords was utilized to transition from technical wireframes to a marketing narrative, demonstrating how the app solves real-world user frustrations.

Pre-Production Setup

- **Workspace Initialization:** A new project was created in the Boords dashboard titled "Movie Booking App Promo."
- **Aspect Ratio Selection:** The **Social (4:5)** aspect ratio was selected. This provides a vertical "mobile-first" feel while leaving enough horizontal width to depict characters and background environments.
- **Style Definition:** A **"Sketch/Pencil"** aesthetic was chosen to maintain a "Low-Fidelity" look, ensuring the focus remains on the story and the UI flow rather than high-definition graphics.

The Storyboarding Process

Step 1: Scene Scripting & AI Prompting

Each frame was generated using descriptive prompts to maintain character consistency (Sarah and Alex) and setting (Parisian rain).

- **The Conflict:** Prompts focused on environmental "pain points" like rainy streets and "Sold Out" signs.
- **The Solution:** Used "Phone-in-Hand" perspectives to showcase the **Le Grand Écran** interface (Discovery, Seat Selection, and QR Confirmation).

Step 2: Composition & Layering

- **Deep Focus:** Frames were composed with the smartphone in the foreground and characters in the mid-ground. This creates a "User-Centric" view where the app is the bridge between the problem and the happy ending.
- **Character Expression:** Special attention was given to Sarah's expressions, transitioning from "Frustrated" (Frame 5) to "Happily Confirming" (Frame 7).

Step 3 : Annotations and Metadata

Using the Boords **Text Fields** sidebar, metadata was added to each frame to define the logic:

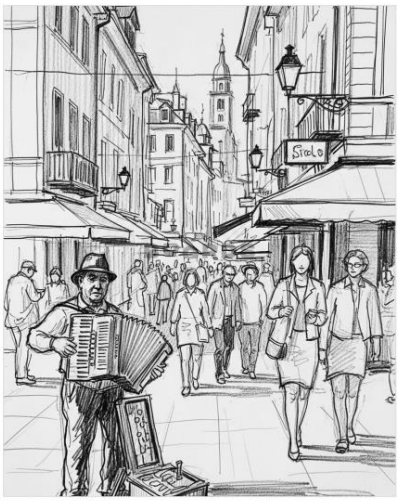
- **Labels:** Short, catchy titles for each stage of the journey.
- **Action Descriptions:** Detailed sentences explaining the user movement and app interaction.
- **Sound/Dialogue:** Used to capture the mood using audio

1 The Rainy Arrival

Alex and Sarah arrive at the cinema in Paris, hoping for a perfect movie night.

2 A Moment of Rest

They take a seat at a nearby cafe to dry off and plan their next move.



3 Parisian Atmosphere

The city is beautiful, but the friends were worried that their outing is ruined.

4 The Big Letdown

They reach the box office only to find the "SOLD OUT" sign prominently displayed.

5 Frustration in the Rain

Standing outside the theater, Sarah and Alex feel disappointed as their plans slip away.

6 The Digital Solution

Sarah pulls out her phone and opens the Le Grand Écranapp to find a nearby screening.

7 Securing the Seats

With the easy visual layout, Sarah happily selects their seats and taps"Pay & Confirm."

8

Seamless EntryAt the theater lobby, they simply show their digital QR code ticket to the concierge.

9 The Perfect Ending!

Relaxed and warm, Alex and Sarah enjoy their movie with popcorn, rescued by the app.
